19. KEY METRICS TO TRACK

1. THE VISION

Faith Empire is a mobile-first app that delivers a fresh Bible verse and a plain-language motivational message every single day, aligned with Decoded Faith Empire's mission of 'Understanding the Bible in Plain Language.'

The app should feel like opening a daily letter from a trusted friend who breaks down scripture in a way that actually makes sense and applies to real life. No church jargon. No fluff. Just truth, decoded.

What Makes This Different

There are hundreds of Bible apps on the App Store. YouVersion alone has 700 million downloads. But Faith Empire is not trying to be a full Bible app. It is a daily devotional experience with a specific voice: real talk, decoded for everyday people. The 'decoded message' is what makes this app unique. No one else is combining daily scripture with a plain-language breakdown in your specific voice and brand.

2. APPLE APP STORE COMPLIANCE GUIDE

This section covers every Apple App Store Review Guideline that applies to Faith Empire, what you need to do to comply, and the risks to avoid. Bible and devotional apps are well-established on the App Store (YouVersion, Olive Tree, First 5, and many others have been approved). However, there are specific guidelines you MUST follow to avoid rejection.

GUIDELINE 4.2: MINIMUM FUNCTIONALITY (HIGHEST RISK)

This is the number one reason simple apps get rejected. Apple's Guideline 4.2 states: 'Your app should include features, content, and UI that elevate it beyond a repackaged website.' If your app only displays a daily verse with no native functionality, it WILL be rejected.

How to Pass Guideline 4.2

Your app must include multiple native features that a website cannot replicate. Here is exactly what to build:

Push Notifications: Daily reminder at user's chosen time (e.g., 6 AM) to read today's verse. This is a NATIVE feature a website cannot do. Apple looks for this specifically.

Offline Access: Cache the current week's verses so they are accessible without internet. This proves the app adds value beyond a website.

Favorites/Bookmarks: Let users heart/save verses to a personal list stored on-device. This is interactive, native functionality.

Share Extension: Generate branded verse images and share to Instagram, TikTok, Messages, etc. using the native iOS share sheet.

Widget Support: An iOS Home Screen widget that shows today's verse. This is a strong signal of native functionality.

Haptic Feedback: Subtle haptic response when saving a verse or sharing. Small but signals native integration.

Dark/Light Mode: Respect the user's iOS system appearance settings.

By including at least 4-5 of these native features, your app clearly provides functionality beyond what a website can offer. This satisfies Guideline 4.2.

GUIDELINE 4.2.2: WEBVIEW / WRAPPER APPS

Apple rejects apps that are 'simply web clippings, content aggregators, or a collection of links.' If you build on Replit as a web app and wrap it in a native shell, the wrapper MUST include native navigation (tab bar, not a hamburger menu), native push notifications, offline caching, and no visible browser UI (no loading bars, no Safari-like elements).

Recommendation: Build the web app on Replit first, then use Capacitor.js or React Native to wrap it into a native iOS app with real native features added on top. Do NOT submit a plain WebView wrapper.

GUIDELINE 5.1.1: PRIVACY

Required Actions:

Privacy Policy: You MUST have a privacy policy accessible both in the app (Settings or About screen) AND in your App Store listing. It must describe what data you collect, how you use it, and how users can request deletion.

App Privacy 'Nutrition Labels': When submitting to the App Store, you must accurately declare what data your app collects (email, name, usage data, etc.) in App Store Connect. Be honest. Apple verifies this.

If you collect emails: You must disclose this. If you use analytics (Google Analytics, etc.), you must disclose that too.

If the app is free with no accounts: Your privacy footprint is minimal. Just declare analytics usage if applicable.

GUIDELINE 5.1.1(v): ACCOUNT DELETION

If your app allows account creation (for favorites sync, email subscription, etc.), you MUST provide an in-app way for users to delete their account. 'Email us to delete' is NOT acceptable. There must be a button/flow inside the app that initiates deletion.

Recommendation for MVP: Do NOT require account creation. Store favorites locally using on-device storage. Collect emails via an optional 'subscribe' form without creating a formal user account. This eliminates the account deletion requirement entirely and simplifies your first submission.

GUIDELINE 3.1.1: IN-APP PURCHASES

If you charge for digital content or features (premium devotionals, audio breakdowns, ad-free experience), you MUST use Apple's In-App Purchase (IAP) system. Apple takes a 15-30% commission.

However, as of the 2025 US court ruling, apps on the US storefront CAN include external links and buttons directing users to alternative payment methods. This means you can link to your website for purchases if you choose, but IAP is still the simplest path for a first app.

Recommendation for MVP: Launch as a completely FREE app. No premium tier. No IAP. This eliminates all payment-related review complexity. Add premium features in a later update once the app is established.

GUIDELINE 1.1: OBJECTIONABLE CONTENT

Religious content is fully allowed on the App Store. Hundreds of Bible apps are approved and thriving. However, your content must not be 'defamatory, discriminatory, or mean-spirited' toward any group. Your plain-language verse breakdowns should be positive, encouraging, and inclusive. As long as your 'decoded messages' are motivational and uplifting (not attacking other faiths or groups), you are fully compliant.

GUIDELINE 2.3: ACCURATE METADATA

Your app name, description, screenshots, and preview video must accurately represent what the app does. Do not use misleading keywords. Do not claim features that do not exist. Your screenshots must show actual app screens, not marketing mockups that differ from the real experience.

GUIDELINE 4.1(c): BRAND NAME PROTECTION (NEW - NOV 2025)

As of November 2025, Apple added a new rule: 'You cannot use another developer's icon, brand, or product name in your app's icon or name without approval from the developer.' The name 'Faith Empire' does not infringe on any existing major app brand. However, before submitting, search the App Store for any existing app named 'Faith Empire' to confirm there is no conflict.

AGE RATING

A daily Bible verse app with no violence, no mature content, no user-generated content, and no web browsing should receive a 4+ age rating. When filling out the age rating questionnaire in App Store Connect, answer 'None' to all content categories. As of January 2026, Apple requires updated age rating responses for all apps, so complete these carefully.

3. APP STRATEGY: WEB APP FIRST, THEN NATIVE

The smartest approach is a two-phase strategy that gets you live FAST while building toward the App Store:

Phase 1: Progressive Web App (PWA) on Replit

Build a full-featured web app on Replit that works beautifully on mobile browsers. Deploy it to a custom subdomain (e.g., app.decodedfaithempire.org). Users can 'Add to Home Screen' on their phones for an app-like experience. This gets you LIVE in days, not weeks. You start building your audience, collecting emails, and generating shareable content immediately.

Phase 2: Native iOS App via Capacitor

Once your web app is solid and tested with real users, wrap it with Capacitor.js (by the Ionic team) to create a native iOS app. Capacitor lets you keep your existing web code and ADD native features on top: push notifications, home screen widgets, haptic feedback, offline storage, and native share sheets. This is how you pass Apple's Guideline 4.2. Then submit to the App Store.

Why This Order Matters

Speed: You can launch the PWA in 1-2 weeks. The native App Store submission process takes 1-4 weeks on top of that (including review time).

Testing: Real users find bugs and give feedback on the PWA before you submit to Apple's review.

Risk Reduction: If Apple requests changes, you can iterate on your web app quickly and resubmit.

Content: You start your ManyChat funnel and social media promotion immediately with the PWA link while the native app is in review.

4. CORE FEATURES (MVP)

Feature	Description	Apple Compliance
Daily Bible Verse	New verse displayed every day, auto-rotating at midnight EST	ESF content — required
Decoded Message	2-4 sentence plain-language motivational breakdown of the verse	Unique value — differentiator
Share Image	One-tap branded image generation for sharing to social media	Native share sheet (4.2)
Favorites	Heart/save verses to a personal list stored on device	Native functionality (4.2)
Verse Archive	Browse previous 30 days of verses	Content depth (4.2)
Push Notifications	Daily reminder to check today's verse	Native feature (4.2)
Offline Access	Current week's verses cached for offline reading	Native feature (4.2)
Dark/Light Mode	Respects iOS system appearance	Native integration (4.2)
iOS Widget	Home screen widget showing today's verse	Native feature (4.2)
About + Privacy	Brand info, links, and privacy policy	Required (5.1.1)

5. FEATURES REQUIRED FOR APPLE APPROVAL

Based on analysis of Apple's current guidelines and successful Bible/devotional apps on the App Store, here are the MUST-HAVE features to pass review:

Non-Negotiable (Will Be Rejected Without These)

- 1. Multiple Interactive Features:** Your app cannot just display text. It must have at least 3-4 interactive features (favorites, sharing, archive browsing, push notifications).
- 2. Native Navigation:** Use a native tab bar at the bottom (Today / Archive / Saved / About). Do NOT use a web-style hamburger menu.
- 3. Privacy Policy:** Accessible both inside the app AND in the App Store listing URL.
- 4. No Crashes:** Test every screen, every button, every edge case. A single crash during review = rejection.
- 5. Complete App:** No placeholder text, no 'coming soon' sections, no broken links. Everything must work.
- 6. Accurate Screenshots:** App Store screenshots must match the actual app exactly.

Strongly Recommended (Significantly Improves Approval Odds)

- 7. Push Notifications:** The single strongest signal that your app is not just a website.
- 8. Offline Functionality:** Being able to read verses without internet proves native value.
- 9. Home Screen Widget:** Immediately demonstrates native iOS integration to reviewers.
- 10. Haptic Feedback:** Even subtle haptics on save/share show native platform usage.

6. TECH STACK (Replit-Friendly)

Phase 1: Web App (Replit)

Layer	Technology	Why
Frontend	React (Vite) or Next.js	Replit supports both natively
Styling	Tailwind CSS	Rapid, mobile-first design
Backend	Node.js + Express or Next.js API routes	Simple API for verse data
Database	Replit PostgreSQL or SQLite	Free, built into Replit
Image Gen	html2canvas or dom-to-image	Branded shareable verse images
Icons	Lucide React	Clean, consistent icon set
Dates	date-fns	Lightweight date formatting
Hosting	Replit Deployments	Custom domain support

Phase 2: Native iOS App

Layer	Technology	Why
Native Shell	Capacitor.js (by Ionic)	Wraps web app in native iOS shell
Push Notifications	Capacitor Push Plugin + APNs	Required for Apple compliance
Offline Storage	Capacitor Storage or SQLite	Offline verse access
Share Sheet	Capacitor Share Plugin	Native iOS share functionality
Widgets	Swift (WidgetKit)	iOS Home Screen widget
Build Tool	Xcode (required by Apple)	Must build with iOS 18 SDK
Distribution	Apple Developer Program (\$99/yr)	Required for App Store

7. DATABASE STRUCTURE

Table: verses

Column	Type	Description
id	INTEGER (PK)	Auto-increment ID
date	DATE (unique)	The date this verse is assigned to
reference	TEXT	e.g., "Jeremiah 29:11"
verse_text	TEXT	Full verse text (KJV, NIV, or preferred translation)
decoded_message	TEXT	Your plain-language motivational breakdown
category	TEXT	Tag: faith, strength, purpose, healing, provision, etc.
book	TEXT	Bible book name for search/filter
created_at	TIMESTAMP	Auto-generated

Table: subscribers (Phase 2)

Column	Type	Description
id	INTEGER (PK)	Auto-increment ID
email	TEXT	Subscriber email
first_name	TEXT	Optional first name
subscribed_at	TIMESTAMP	When they opted in
active	BOOLEAN	Whether subscription is active
source	TEXT	Where they subscribed from (app, manychat, etc.)

8. APP PAGES & ROUTES

Page 1: Today's Verse (/) — Home Screen

Hero section with today's date. Bible verse displayed prominently in large, elegant typography. Scripture reference below the verse. 'DECODED' section with the plain-language motivational message. Share button (generates branded image, opens native share sheet). Heart/Favorite button. Bottom tab navigation to all pages.

Page 2: Verse Archive (/archive)

Scrollable list of the past 30 days of verses. Each card shows date, verse reference, and first line of the decoded message. Tap to expand full verse plus message. Optional filter by category.

Page 3: Favorites (/favorites)

Saved verses stored locally on device (localStorage for PWA, Capacitor Storage for native). Same card layout as archive. Option to remove from favorites.

Page 4: About & Settings (/about)

Brief description of Decoded Faith Empire and its mission. Link to main website: decodedfaithempire.org. Links to TikTok, Instagram, and other social profiles. 'Subscribe for daily verses' email opt-in. Privacy Policy (linked and accessible directly in-app). Notification preferences (Phase 2). Dark/Light mode toggle.

API Endpoints

GET /api/verse/today — Returns today's verse and decoded message

GET /api/verse/:date — Returns verse for a specific date

GET /api/verses/archive — Returns last 30 days of verses

POST /api/subscribe — Adds email to subscriber list

9. DESIGN DIRECTION & BRANDING

Brand Colors

Color	Hex Code	Usage
Gold	#C8A84E	Headers, accents, logo, CTAs, dividers
Black	#0D0D0D	Primary background
White	#FFFFFF	Body text, verse text
Crimson	#8B1A2B	Accent highlight (from crown swoosh)
Dark Gray	#1A1A1A	Card backgrounds, secondary surfaces
Light Gray	#999999	Metadata text, dates, subtle labels

Typography (Google Fonts — Free)

Display / Headers: Playfair Display or Cormorant Garamond — elegant, editorial, faith-forward.

Body Text: DM Sans or Outfit — clean, modern, highly readable on mobile.

Verse Text: Lora italic — classic scripture feel without being stuffy.

Visual Elements

Cross and Crown logo in the header (use your existing logo file). Subtle gold gradient line dividers between sections. Dark textured background (subtle noise or linen pattern for depth). Animated fade-in on verse load (CSS animation, 0.3s ease-in). Gold glow/highlight effect on the scripture reference. Share and favorite buttons in gold outline style. Bottom tab bar: gold active state, gray inactive state.

10. MOBILE WIREFRAME

Home Screen Layout (Today's Verse)

[Cross & Crown Logo] FAITH EMPIRE

❖ February 10, 2026 ❖

"For I know the plans I have for you," declares the LORD, "plans to prosper you and not to harm you, plans to give you hope and a future."

– Jeremiah 29:11 –

God is not winging it with your life. Even when it feels like everything is falling apart, there is a blueprint. You are not an accident and neither is this season you are in. Keep going.

[■ Save] [■ Share]

[Today] [Archive] [Saved] [More]

11. CONTENT STRATEGY (365 VERSES)

Content Loading Options

Option A: Pre-Load All 365 Verses (Recommended for MVP). Write or curate 365 verse plus decoded message pairs. Load them all into the database with assigned dates. The app simply queries 'give me the verse where date = today.' No AI, no API calls, no external dependencies. Fastest, most reliable.

Option B: Use an API + AI for Dynamic Messages. Use a free Bible API (bible-api.com) to pull verses. Use OpenAI API to generate the 'decoded' message on-the-fly. Pro: less upfront content work. Con: API costs, potential hallucinations, inconsistent voice.

Option C: Hybrid (Best Long-Term). Pre-load 90 days of hand-curated content for launch. Use AI to draft the next quarter's content. You review and edit before publishing. Always 90 days ahead, always quality-controlled.

Weekly Theme Rotation

Day	Theme	Focus
Monday	PURPOSE & CALLING	Why you are here, your assignment
Tuesday	STRENGTH & COURAGE	Overcoming fear, boldness
Wednesday	WISDOM & DISCERNMENT	Making good decisions
Thursday	PROVISION & ABUNDANCE	Trust in God's supply
Friday	FAITH & TRUST	Walking by faith not sight
Saturday	HEALING & RESTORATION	Wholeness, recovery, renewal
Sunday	PRAISE & GRATITUDE	Worship, thanksgiving, joy

Sample Verse + Decoded Message

Verse: *'Trust in the LORD with all your heart and lean not on your own understanding.'* — Proverbs 3:5

Decoded: *'Your brain is going to try to logic its way through everything. But some doors only open when you stop trying to figure out the "how" and just trust the "Who." God does not need you to have it all mapped out. He needs you to take the next step. That is it. Just the next one.'*

12. SHAREABLE IMAGE GENERATION (Growth Engine)

This is the feature that drives organic growth on social media. When a user taps 'Share,' the app generates a branded image with the verse text, scripture reference, Decoded Faith Empire logo, and website URL. Every share is a branded piece of content with your logo on it. This turns every user into a content distributor.

Technical Implementation

Use html2canvas or dom-to-image JavaScript library. Render a hidden branded div with the verse content. Convert to PNG. Trigger the native share sheet (or download on web). Pre-format for Instagram Stories (1080x1920) and feed posts (1080x1080).

Share Image Design

Black background with subtle texture. Gold cross and crown logo at top (small). Verse text in white, Lora italic. Scripture reference in gold. 'DECODED' label with the motivational message in a smaller, clean font. 'decodedfaithempire.org' at the bottom in gold. Overall aesthetic: premium, minimal, share-worthy.

13. REPLIT PROJECT SETUP (Step-by-Step)

Step 1: Create the Project. Go to replit.com. Click 'Create New Repl.' Choose template: 'React (Vite)' or 'Next.js.' Name it: `faith-empire-daily-verse`.

```
Step 2: Install Dependencies. npm install tailwindcss postcss autoprefixer html2canvas date-fns
lucide-react
```

Step 3: Set Up the Database. In Replit, go to the 'Database' tab (left sidebar). Choose PostgreSQL or use the built-in Replit key-value DB. Create the verses table with the schema from Section 7.

Step 4: Build the API. Create endpoints that return today's verse, a specific date's verse, and the last 30 days archive.

Step 5: Build the Frontend. Build all pages from Section 8. Apply design from Section 9. Use bottom tab navigation. Test on mobile (Chrome DevTools responsive view).

Step 6: Load Content. Create a seed script that loads your first 90 verses into the database. Or create a simple admin page (`/admin`) to add verses manually.

Step 7: Deploy as PWA. Click 'Deploy' in Replit. Add a `manifest.json` and service worker for PWA support. Connect custom domain: `app.decodedfaithempire.org`.

Step 8: Wrap for iOS (Phase 2). Install Capacitor: `npm install @capacitor/core @capacitor/cli`. Add iOS platform: `npx cap add ios`. Add native plugins for push, share, storage. Open in Xcode, build with iOS 18 SDK, submit to App Store.

14. FILE STRUCTURE

```
faith-empire-app/  
  public/

  README.md
```

15. APPLE APP STORE SUBMISSION CHECKLIST

Complete every item on this checklist BEFORE submitting to Apple.

#	Item	Status
1	Apple Developer Program enrolled (\$99/year)	☐
2	App built with Xcode 16+ and iOS 18 SDK	☐
3	App tested on real iPhone device (not just simulator)	☐
4	No crashes on any screen or user flow	☐
5	Push notifications implemented and tested	☐
6	Offline mode works (cached verses accessible)	☐
7	Favorites save/load correctly on device	☐
8	Share generates branded image and opens share sheet	☐
9	Native tab bar navigation (not web hamburger menu)	☐
10	Dark mode supported (respects iOS system setting)	☐
11	Privacy policy accessible inside the app	☐
12	Privacy policy URL added in App Store Connect	☐
13	App Privacy "nutrition labels" completed honestly	☐
14	Age rating questionnaire completed (target: 4+)	☐
15	App name "Faith Empire" searched — no conflicts found	☐
16	App description is accurate and matches actual features	☐
17	Screenshots are real screens from the actual app	☐
18	App icon meets Apple specs (1024x1024, no alpha)	☐
19	No placeholder text or "coming soon" anywhere	☐
20	No mention of competing platforms (Android, etc.) in metadata	☐
21	All URLs in the app work and are not broken	☐
22	No account creation required (MVP) — avoids deletion rule	☐
23	If premium features exist: Apple IAP implemented	☐
24	Review notes explain app purpose clearly to reviewer	☐
25	Contact info is accurate in App Store Connect	☐

16. MONETIZATION OPPORTUNITIES

Revenue Stream	How It Works	When
Email List Growth	Get the daily verse in your inbox — builds list for product launches	Launch
Digital Product Upsell	After 7 days: soft CTA to your course/devotional/ebook	Month 1
Merch Integration	"Wear today's verse" — link to Decoded Faith Empire TikTok Shop	Launch
Premium Tier	Free = daily verse. Premium (\$4.99/mo) = audio, deeper breakdowns	Month 1
Sponsorships	Faith-based brands sponsor daily verses as audience grows	Month 6+
Affiliate	Recommend study Bibles, journals, faith tools with affiliate links	Month 1

17. GROWTH & LAUNCH PLAN

Pre-Launch (Week 1-2)

Build the MVP web app on Replit. Load 90 days of verse content. Test on mobile and desktop. Create 5 teaser reels for TikTok and Instagram: 'Something is coming for your morning routine...'

Web App Launch (Week 3)

Deploy PWA to app.decodedfaithempire.org. Announce on all platforms with ManyChat keyword trigger: 'FAITH'. ManyChat automation delivers the app link plus collects email. Pin a post: 'Get a daily Bible verse decoded in plain language, free app, link in bio.' Share the first verse image on Stories.

App Store Submission (Week 4-6)

Wrap web app with Capacitor and add native features. Build in Xcode with iOS 18 SDK. Complete App Store Connect listing. Submit for review (typical review: 24-48 hours). Address any feedback from Apple, resubmit if needed. Once approved, announce the iOS app to your audience.

Ongoing Growth Loop

User visits app > Reads verse > Taps share > Branded image goes to their Stories/feed > Their followers see the logo and URL > They visit the app > Cycle repeats. Every day, post today's verse as a Reel/carousel on your own page using the app-generated image. CTA: 'Comment FAITH to get this delivered to your DM every morning.' ManyChat triggers, drives to the app, collects email, and nurtures.

18. PHASE 2 FEATURES (After MVP Launch)

Feature	Description
Daily Email Delivery	Automated email with today's verse at 6 AM EST
Audio Devotional	60-second audio breakdown in your voice
Prayer Journal	Text input to write thoughts/prayers for each verse
Streak Tracker	"You have read 14 days in a row" — gamifies daily visits
Community Wall	Users share what the verse meant to them (moderated)
Verse Search	Search by keyword, topic, or book of the Bible
Reading Plans	7-day, 21-day, 30-day themed reading plans
Widget	iOS Home Screen widget showing today's verse snippet
Apple Watch	Daily verse notification on Apple Watch
Android Version	Capacitor makes this a one-click addition

Note on Apple Compliance for Phase 2 Features

If you add a Community Wall (user-generated content), Apple Guideline 1.2 requires: a way to report content, a way to block users, and a moderation system (can be manual). If you add premium subscriptions, Apple Guideline 3.1.1 requires In-App Purchase. If you add account creation, Guideline 5.1.1(v) requires in-app account deletion.

19. KEY METRICS TO TRACK

Metric	Why It Matters
Daily Active Users (DAU)	How many people check the verse daily
Share Rate	Percentage of visitors who share the verse image
Return Rate (Day 1, Day 7, Day 30)	Are users coming back? Retention is everything
Email Opt-Ins	List growth from the app
Favorites Count	Engagement depth — are people saving verses?
Average Session Duration	Are people reading the decoded message or bouncing?
Referral Traffic	How many new users come from shared images
App Store Rating	Target 4.5+ stars for organic discoverability
Push Notification Opt-In Rate	How many accept daily reminders

Use Google Analytics (free) or Plausible (privacy-friendly, no cookie banner needed) for web tracking.
Use App Store Connect Analytics for iOS app metrics.

FAITH EMPIRE

Understanding the Bible in Plain Language

decodedfaithempire.org
